

NHS APP

UI design

Title:

The title will remain on each page to help create a level of consistency within the application.

Colour theme of this site can/will probably be changed, only created as a nice looking placeholder while designing the main functionality

NHS APP

Toggle switch:

- Switch between dark and light mode.
- The current setting will have the work emphasised (possibly be bold) in order to indicate the current setting.
- This is a non-functional feature
- Will remain on each page as design-wise it becomes inconvenient to only have it on the main page

Enter button:

- Will change colour when hovered in order to indicate clickable function.
- Drop shadow also added in order to indicate function

Enter Postcode

NEXT

Search Bar:

- This will change colour depending on the current setting for dark/light mode.

DARK / LIGHT

NHS APP

Back Button:

Instead of having a lot of different functions and options included on the main page (such as entering the postcode and changing it), a back button would be added to maintain a simple look for each page.

SELECT THE DESIRED SERVICE

GP

OPTICIAN

DENTIST

SCHOOL

Service Buttons:

- Same format as the buttons from the last page to maintain consistency.
- May be changed to a filtered setting shown on the next page dependent on time/and skill.

DARK / LIGHT

Type of service:

- Ordered from closests to furthest
- Selectable buttons indicated by consisten button formats
- Slider placed to the left may be optional if there is a less clunky visual cue to the sliding aspects of the results
- Depending on how the user selects the type of service the buttons will include the type of service, ie if its a GP, school, etc.

EXAMPLE SERVICE

EXAMPLE SERVICE

EXAMPLE SERVICE

Sort checkboxes:

- A much more optional feature filtering the services depending on whether or not it's an NHS organisation.
- Not provided with the dropshadow as it is not a pressable button. Flatter look indicates use of the check box

Service Check boxes:

- This would make the last page redundant.
- Preferred option as it would allow for multiple services to be searched at once and switched quicker.
- However this is dependant on our time and skill.

NHS APP

SERVICE NAME

- ADDRESS
- PHONE NUMBER
- EMAIL
- DISTANCE FROM POSTCODE

Service information:

- Present the essential information about each service, ie name, phones number, address etc.
- Distance would be a rough approximation and a non-essential feature to be added if we have enough time.
